**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1-88 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art including applicant's own work does not teach a left and right pupil imaging system which each have a curved mirror and then combining the left and right imaging systems with a common beamsplitter ("beamsplitter disposed to fold both left and right paths" as claimed in part  $\phi$  of applicant's claim 87, the other independent claims claim a similar common beamsplitter with different language). For example US 5,483,307 to Anderson teaches in figures 1 and 2 an imaging system, a beamsplitter 17, however it uses one common curved mirror 18. Another example is taught by Fujiyama (US 5,754,344) in figures 1A and 1B. US 6,014,164 to Woodgate et al. teaches in figure 23 a autostereoscopic system comprising of a left and right imagining system and a beam splitter (129) as well as two curved mirrors (140, and 141), however the modulators (127 and 128) are after the beam splitters and therefore Woodgate does not project a left curved image towards the center of curvature of the curved mirrors, since the light is not image light until after the modulator. Applicant's own copending patents and copending applications do not teach the two curved mirrors and beamsplitter either. Accordingly all claims are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

US 6,416,181 to Kessler et al.

US 6,768,585 to Agostinelli et al.

US 6,702,442 to Agostinelli et al.

US 6,550,918 to Agostinelli et al.

US 6,511,182 to Agostinelli et al.

All five teach ball lenses, a single curved mirror and at least one beamsplitter.
